

CP Anti-Wrap Screen™

Newsprint & Large Fiber Separation with Reduced Maintenance

Flexible packaging, film and other contaminants are on the rise. With the challenges MRF operators face today, there is no reason to spend time cleaning screens.

The **CP Anti-Wrap Screen™** performs newsprint and large fiber separation and is especially designed to reduce wrapping, requires minimal maintenance, and keeps operating costs low.

The large shaft circumference keeps problematic materials from wrapping, resulting in less cleaning and maintenance.

Replacement of long-lasting single bolt on discs is quick and simple.

Features

- Separation of newsprint and large fiber from materials stream, with third cut option
- Oversized shaft circumference mitigates wrapping
- Simple design keeps total number of discs and use of rubber to a minimum
- Non-pinching motion eliminates jamming
- High amplitude design agitates containers away from paper
- Foolproof lock out tag out mechanism with larger access door
- One-bolt discs are easy to change

Made in the
USA

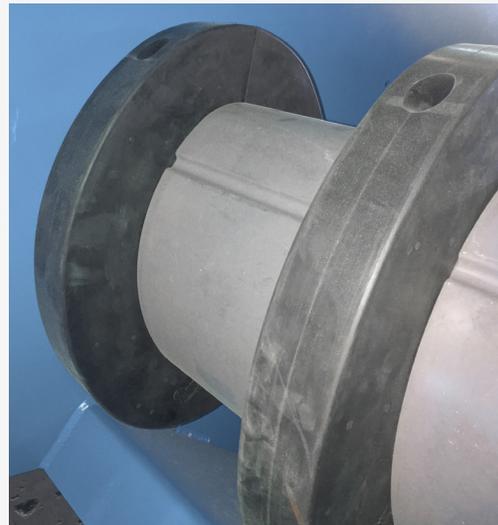

CP Anti-Wrap Screen™

Technical Specs

Machine width options	100", 120", 140"
Decks	1
Rotors	16
Rotor shaft circumference	27"
Drive	CP SyncDrive™
Motors	Single 10hp drive

CP SyncDrive

- Sprocketed toothed belt system
- Patented timing belts last up to 4 times longer than chains
- No oilers necessary
- High precision drive
- Quiet running
